(54) Title: **SYNCHRONIZATION METHOD OF UPnP-BASED HOME NETWORK**

(57) Abstract: Synchronization method of an UPnP (Universal Plug and Play)-based home network is disclosed to automatically transfer information of a CP (Control Point) to a different CP. By switching a role of the CP or generating a virtual UPnP device through the CP, information among plural CPs according to user's roaming can be automatically transferred or exchanged, guaranteeing a continuity of an operation. Thus, time for constructing a system can be reduced and user's convenience is maximized.
